About this Directory

Saskatchewan suppliers are at the forefront of providing innovative solutions to the global mining industry. With a focus on efficiency and sustainability, Saskatchewan companies offer cutting-edge products and services to reduce costs, maximize efficiencies, minimize environmental impacts, enhance worker safety, and optimize resource utilization. Saskatchewan companies are driving positive change in the mining sector, demonstrating a commitment to responsible practices and meeting the evolving needs of the industry. Saskatchewan produces 34% of the world's potash and 20% of uranium, has the most helium in Canada, is home to 27 of 34 critical minerals, is the 2nd largest oil producer in Canada, and is also home to coal, oil sands, diamonds, copper, gold, rare earth elements, and lithium, to name a few. If you would like a direct introduction to any of the listed companies, please contact the STEP team member listed on this page and they will be happy to facilitate the introduction.

Axiom Exploration Group is an employee-owned company with its corporate head office located in Saskatoon, Saskatchewan. Established in 2011, Axiom Group is a complete consulting firm providing a diverse set of technical services within, and integrated across, each of the company's four main divisions: Exploration, Geophysics & Geomatics, Environment, and Energy Services. Axiom considers their consultation process as transformational rather than transactional, and pride themselves on their dedication and commitment to delivering outcomes that ensure the continued successes of their clients.

Products & Services

The ability to confidently facilitate the completion of any project (e.g., geological, environmental, and engineering) for clients in Saskatchewan, across western and northern Canada, and internationally. The company's experienced team consults globally with working visas and permits already in place in multiple countries. Axiom routinely works in logistically challenging and remote areas, and have experience adapting and succeeding in challenging geographic, environmental, and geopolitical circumstances.

Bit Service Company Ltd. offers a wide range of quality products for the mining, construction, and materials handling industries. We offer warehousing of inventory, fabrication facilities, as well as a staff of experienced marketing, technical, and shop personnel. We believe in our commitment to the support of current and prospective customers and our insistence on high quality products and look forward to helping meet the needs of an increasing list of customers both within and beyond the industries currently served. Bit Service Company provides a valuable service to its mining customers by fabricating a line of support equipment and accessories, in most cases unique to a certain customer's needs.

Products & Services

Manufacturing carbide and specialty cutting tools for underground mining since 1965, they have grown to also provide full design, fabrication and repair of cutting assemblies for underground mining and tunnelling equipment, including cutting optimization and wear reduction.

Calian Composites has expanded their current Saskatoon-based Arthur Rose location to over 30,000ft². The expansion brings the opportunity for increased production capabilities, as well as the ability to venture into new industries that would benefit from advantages of the innovative composite carbon fiber technology.

Calian Composites specializes in the design and production of large high-precision, carbon epoxy, satellite antenna structures. However, they are exploring any new markets that can leverage composite structures that are rustproof, corrosion-resistant, durable and have a high strength-to-weight ratio. They offer composites-specific engineering, metrology, project planning services and prototyping right through to full production of final products and assemblies.

"In industries like mining, the inherent corrosion protection and lightweight benefits of composites really shine and can provide some substantial cost savings if implemented correctly," added Rennie. "Saskatchewan companies have a heritage of providing local solutions and supporting each other. Having grown up in Saskatchewan, this is something I take great pride in and want our company to reinforce."

Products & Services

Composites-specific engineering, metrology and project planning services, right through to full component prototyping with production of final products and assemblies. Calian Composites currently works in the Defence, Marine/Naval and Civil markets and is expanding into Mining and Agriculture as well as general composites such as: kitting and cutting services, pattern and mold making, and rapid composite prototyping.

Cameco is one of the largest global providers of the uranium fuel needed to energize a clean-air world. Their competitive position is based on their controlling ownership of the world's largest high-grade reserves and low-cost operations, as well as significant investments across the nuclear fuel cycle, including ownership interests in Westinghouse Electric Company and Global Laser Enrichment. Utilities around the world rely on Cameco to provide global nuclear fuel solutions for the generation of safe, reliable, carbon-free nuclear power. Cameco is proud to be one of Canada's largest employers of Indigenous people, and their land holdings, including exploration, span about 1.8 million acres, the majority near their existing operations in northern Saskatchewan. Their head office is in Saskatoon, Saskatchewan.

Products & Services

Uranium mining, refining and conversion services.

Canada North Environmental Services (CanNorth) provides a full range of environmental services and is 100% First Nations owned by the Lac La Ronge Indian Band, Saskatchewan's largest band. They provide high quality, cost effective environmental services and since 1981 have completed nearly 4,000 projects, both nationally and internationally. Their clients include the world's largest mining companies, crown corporations, government, and well established oil and gas companies. CanNorth offers the technical skills and knowledge to deliver solutions for managing environmental risk in ways that benefit their clients, protect the environment, satisfy regulatory requirements, as well as support local communities through employment, training, and economic benefits. Projects are undertaken using defensible environmental study design, state-of-the-art technology for analyses, evaluation, and problem solving, and local Aboriginal participation. CanNorth has developed and implemented strong quality, environment, and safety management systems that meet or exceed international standards. In fact, CanNorth is the only First Nation's owned consulting company in the world to obtain ISO 9001, the international standard for quality management, ISO 14001, the international standard for environmental stewardship and management, and OHSAS 18001, the international standard for occupational health and safety certifications. CanNorth is also an ISNetworld registered company

Products & Services

Environmental impact assessment, environmental effects monitoring, regulatory and licensing issues, human health and ecological risk assessments, environmental site assessments, aquatic toxicology, aquatic and fish studies, water quality investigations, hydrological assessments, wildlife investigations, wildlife and vegetation assessments, contaminant investigations, data management and analyses, habitat evaluation and restoration, archaeology/heritage resources, and forestry.

Canada Training Group is an international consulting firm providing training programs and consulting services to hundreds of organizations in Canada and abroad. They have built their reputation on providing hands-on critical skills training to address 21st Century problems and challenges facing their industrial clients. Since 1980, they have trained more than 25,000 people who have applied these critical skills to significantly improve safety, quality, productivity and cost control, resulting in safer, more effective work places and an improved bottom line for their clients.

Products & Services

Extensive training in a broad range of leadership, engineering and technical disciplines and 5 highway trailer vans that they have customized as mobile electrical training laboratories. These unique units enable them to come to a client's site and provide critical skills training in advanced safety practices and procedures; substation apparatus testing and maintenance; and motor control and VFD troubleshooting. They are ISO 9001 certified and accredited to provide CEUs. All courses are customized to the needs of each facility.

The Canadian Light Source (CLS) is a national research facility, serving national and international scientists from academia, industry, and government institutions. CLS is the only synchrotron in Canada and one of the largest scientific infrastructure investments in our country's history. More than 1,000 researchers from across Canada and around the world use the CLS every year, in innovative health, agriculture, environment, and advanced materials research. From helping in the fight against COVID-19 to creating new cancer-fighting drugs, developing more nutritious and climate-resistant crops and supporting clean-tech and green mining processes, CLS's infrastructure and experts help researchers solve problems, train the next generation of scientists, and support industries to become more efficient and sustainable.

Products & Services

Direct access to high-resolution data. Our non-destructive techniques reveal the structure and properties of materials, delivering superior insights and enabling breakthrough discoveries. Unlike traditional methods, our synchrotron-based techniques provide unmatched spatial and spectral resolution, allowing for the detection of sub-ppm concentrations. Our customizable services, tailored to client's specific needs, empower our customers to unravel complex technical challenges and unlock new possibilities, to improve their processes, products, or services.

Established in 1992, Capital I Industries has been a pioneering leader in the development and manufacturing of a comprehensive range of grader-mounted and stand-alone road maintenance equipment. Our solutions are designed to optimize performance of all types of graders, ensuring efficient and effective road maintenance. Product lineup includes one-way snowplows, sod mulchers, U.S. / Canada patent state-of-the-art postless snow wings, brush and grass mowers, dozers, quick attaches and their newest additions, Capital I sloper / gravel reclaimer and road groomer. Capital I's facility is well over 30,000 sq ft, housing a machine shop with several experienced journeyman operators, including CNC milling and lathing. Also hosted onsite is CNC plasma cutting with experienced technicians, powder coat painting, and a full staff of well-trained welders and fabricators. The engineering department utilizes 3D-CAD modeling software for all product design, which reduces prototyping time and increases product manufacturing efficiencies. Capital 'I' has expanded its vision into the mining and exploration field, building and designing state-of-the-art mining equipment for above and below ground. Product under divisional company Irving Machine Inc. include exploration drilling equipment and oil and gas pipe handling equipment. Their shop is ISO and CWB certified.

Products & Services

Grader mount road maintenance equipment, above and below ground mining, exploration drilling equipment, and oil and gas pipe handling equipment.

DynaIndustrial is a fully integrated engineering and manufacturing company, specializing in large custom design/build projects, industrial equipment repair and medium volume manufacturing. DynaIndustrial's commitment to safety and quality is recognized in the following certifications: COR, ISNetworld, ISO 9001:2015 and CWB. DynaIndustrial provides; custom engineering/design, machining, welding, fabrication, and millwrighting services. In addition, they also manufacture/repair hydraulic cylinders and offer level 3 & 4 service rig inspections. Their global footprint includes the following industries: mining, pipe mills, steel mills, and oil and gas. For over 48 years, DynaIndustrial has been successfully solving these industries most challenging problems with innovative engineered designs, turnkey solutions and quality products that increase productivity, improve safety, and decrease maintenance downtime. DynaIndustrial is the manufacturer of the DynaBolter, a semi-automated single operator roof bolter. DynaIndustrial has also partnered with Broadbent. Together they provide the best centrifuge service and support in the mining industry.

Products & Services

Custom design and manufactured equipment for mines (roof bolters, chutes, ducts, centrifuges, miner components, etc.), steel mills (pinch roll consoles, transfer cars, furnace platforms, sideguides, etc.), pipe mills (pipe handling equipment, pipe double jointing lines, rotary plasma cutoffs, uncoilers, id welders, pipe collapse testers, etc.), and oil and gas (top drive components).

Enviro Integration Strategies is sparking a mine waste revolution, focused on reducing the risk of costly and dangerous mining waste failures, finding ways to create value through mining circularity, and helping mining executives make proactive, safer decisions. The company is developing innovative software specifically designed to comply with global waste management standards and produce transparent performance disclosures. EIS will work hand-in-hand with their client's teams to reduce their waste management risks and to facilitate a shift in operating culture where resilient and responsible practices become the norm.

Products & Services

Their risk evaluation software provides governance assurance, giving you a proactive look at the quality of past work done, to know if the site is well understood, the design and analysis were rigorous enough, and if the facilities were built and are being operated according to design. Having this information in one place is critical to diagnosing gaps and developing remedial plans, to lower the potential of a facility failure.

Environmental Monitoring Solutions (EMS) is a technology company that produces Autonomous Sensors, to remotely transmit continuous data to support predictive modeling. EMS Sensors provide a cost-effective solution for monitoring and management of soils and water on your sites. Whether you are focused on understanding hydrocarbon contamination, measuring carbon sequestration, detecting subsurface methane emissions, and/or optimizing agricultural yields, EMS offers real-time actionable insights. Our solutions empower adaptive management practices, enabling swift responses to both environmental and agricultural challenges.

Products & Services

Soil and groundwater sensors for continuous data gathering, predictive modelling software, dashboard data reporting, and proprietary natural hydrocarbon bioremediation technology. EMS sensors provide ongoing data collection for a better understanding of impacts and trends for soil and groundwater. Predictive software provides insights to improve and accelerate decision making. The natural insitu hydrocarbon bioremediation system operates as an affordable, low footprint, low power option proven to reduce hydrocarbons by 85 to 95% in 1 to 3 years.

Graham Group is an employee owned construction solutions provider with over eight decades of experience delivering exceptional project outcomes. They provide general contractor, design-build, construction management, public-private-partnership (P3) and integrated project delivery (IPD) services to the commercial, industrial and infrastructure sectors. With a proven track record of superior performance and an unwavering commitment to achieving the highest safety standards, they have grown to become one of Canada's largest construction companies with the resources, capacity and expertise to undertake and successfully deliver projects of every scope, scale and complexity. They are proud to be a Platinum Member of Canada's 50 Best Managed Companies. With decades of experience building better cities, towns, and communities, their infrastructure expertise encompasses the complete scope of projects. Their industrial division, along with their earthworks, underground & piling team, has serviced this industry for over 50 years, working on projects.

Products & Services

Construction services across three different sectors including commercial, infrastructure, and industrial. Projects include educational facilities, hospitals and healthcare institutions, office buildings, warehousing and distribution facilities, retail outlets and complexes, recreational facilities, hotels and casinos, multi-unit residential housing developments, roadways, bridges and interchanges, public transit, airports and seaports, water and wastewater treatment facilities, water management and storage structures, conventional and alternative power generation and distribution, including wind farms and district energy plants, oil, natural gas and petrochemicals, power generation, refining and upgrading, mining and forestry, potash, gold and uranium, site preparation, including excavating and grading, underground pipe installation, mass excavating and heavy construction, haul road construction and operation, piling- driven, drilled, CFA and more.

Greenwave delivers data-driven, energy management solutions for commercial, industrial, institutional and community buildings. Their permanently installed measurement devices allow the company to continually identify and prioritize the opportunities and guide their clients through a sequential electrical, natural gas and water conservation process. While identifying the ROI based opportunities, Greenwave will measure and verify the utility savings and GHG emission reduction results. Greenwave's open architecture platform allows real-time data to integrate into existing building management systems offering performance based control and predictive maintenance alerts. These benefits enhance life safety and emergency readiness systems such as the real-time identification, notification and resolution of water and natural gas leaks. Energy conservation projects lead to great stories. As such, Greenwave provides digital public engagement dashboards that display strategic project messaging, live performance metrics and easy to comprehend conservation results.

Products & Services

Energy management software combining real-time water/gas/electrical consumption, energy efficiency portfolio planning, environmental and climate action planning, ESG consulting, data and operation consulting, internal operator dashboard, maintenance alerts on critical assets, leak detection alerts on water and gas, safety alerts, and public facing interactive dashboard.

The Petroleum Technology Research Centre (PTRC) is a non-profit R&D corporation founded in 1998 by Natural Resources Canada, Saskatchewan Ministry of Energy and Resources, the University of Regina and the Saskatchewan Research Council. The PTRC uses R&D to advance and support the recovery of Canada's rich but often difficult to access oil resources. The PTRC is committed to conducting research that will help the petroleum industry implement sustainable technologies that minimize environmental impacts, such as climate change caused by greenhouse gas emissions, while maximizing oil recovery. Many of the PTRC's projects also hold potential for minimizing water use and reducing land impacts of oil recovery.

Products & Services

Managing the world's largest CO₂ Storage Project (IEA GHG Weyburn-Midale CO₂ Monitoring and Storage Project), and potentially the world's largest avoided CO₂ emissions project (JIVE Project), advancing enhanced oil recovery technologies through a newly established Business-Led Network of Centres of Excellence (Sustainable Technologies for Energy Production Systems, or STEPS), managing western Canada's first integrated CO₂ capture, transportation, injection and storage project involving the injection of CO₂ into a deep saline formation (Aquistore), and directing research in an investigation of fluids and their locations in the Saskatchewan subsurface (Saskatchewan Phanerozoic Fluids and Petroleum Systems).

Prairie Agricultural Machinery Institute (PAMI) is a third-party research and development facility who is committed to providing their clients with the highest quality service and innovative solutions. Their engineers are passionate about machines and they provide state-of-the-art testing facilities so their clients can learn more. Their goal is to create efficiencies, find solutions and provide insight by studying, designing, building and testing machines and their components in real life situations. PAMI offices feature industrial testing facilities that provide vehicle, machine and equipment manufacturers with comprehensive physical testing services complemented by advanced product engineering and development services for clients in the agricultural, transportation and mining sectors.

Products & Services

A full range of engineering services including lab and field testing of equipment, standards compliance, vibration, safety (ROPS, FOPS) testing, component & whole-vehicle durability testing, prototype machinery development, design services, concept development and 3D engineering modeling, prototype development, and complete management of field-testing programs in Canada, USA and overseas. PAMI works with clients to develop innovative technologies and the intellectual property remains with the client.

Prairie Clean Energy (PCE) is a solution provider for decarbonizing the energy sources in Canada and globally, with a focus on power, oil and gas, mining and agricultural sectors in the Canadian and US prairies. Their company's aim is to aggregate and process under-utilized biomass resources in the prairies including agricultural and forestry residues, and produce a safe, transportable, and storable feedstock. One which can be used for the production of low-carbon bioenergy (bioheat and biopower) with up to 90% lower GHG emissions potentials compared to heat and power produced by fossil fuels.

Products & Services

Converting agricultural waste into biomass fuel for the global industrial marketplace.

Since forming in 2004, Mosaic has grown to be a global leader in phosphates and potash crop nutrition. They are proud to be a competitive producer with strong customer relationships, and the financial strength to invest in growth and innovation. And they've led the industry in developing high-quality performance products that help growers succeed. None of Mosaic's success would be possible without our greatest asset—our people. Each employee at Mosaic adheres to the same companywide principles and priorities, and contributes to the company strategy: to win in their core businesses of phosphates, potash and international distribution, and to grow in new ways. Mosaic Principles: They are responsible, innovative, collaborative and driven. They are accountable for the safety and wellbeing of their colleagues and company. They act with integrity and conviction. They are careful stewards of natural resources. They foster innovation and encourage ideas that makes them better. They collaborate across departments and geographies to accelerate their performance.

Products & Services

Mining and processing of phosphate and potash minerals into crop nutrients, and then shipping via rail, barge and ocean-going vessel to their customers in the major agricultural centers of the world. The work of mining and processing potash and phosphate minerals is an energy- and water-intensive endeavor. They work carefully to maximize efficiencies and minimize their use of energy and natural resources, and have made significant progress in reducing Mosaic's environmental footprint. Mosaic is an important driver of economic activity in each of their operating communities. They strive to be a thoughtful and engaged neighbor, using their financial resources, expertise and innovative spirit to demonstrate their shared commitment to good corporate citizenship.

Threeosix Industrial Services Inc. is one of the largest majority First Nation owned industrial construction, underground mining, fabrication, and forestry providers in Canada. Since its inception in 2016, Threeosix has grown to have offices in Saskatoon, Calgary, Edmonton, and Winnipeg, along with an occupational site presence on projects stemming across Canada and fabrication capacity in both Saskatoon and Edmonton. Additionally, Threeosix prides itself on having strong subcontractor relationships with many notable organizations to provide support where needed. With a direct hire workforce that prioritizes regional labor collaboration and local community involvement, Threeosix's staff now consists of an average of 500 people across multiple different divisions, creating a well-rounded culture that has made the company what it is today.

Products & Services

Threeosix specializes in the mining, energy, infrastructure, institutional, and ag industrial sectors with capabilities stemming from concrete foundations, piping and mechanical, general contracting, structural steel, and module assembly, with a key competency for project management. With experience in everything from site services and fabrication supply and installation to high-level clearing and brushing, to underground concrete batching and HDPE, Threeosix takes pride in being a versatile operation that can get the job done beyond expectations.

Titan's customers include mine sites for their carbon products and wood waste upcycling services. Titan Clean Energy has been a leader in pyrolysis technology and the advancement of biocarbon applications since 2008. The company is expanding into activated charcoal for filtration, carbon-based bioplastic inputs, compostable bioplastic masterbatches, as well as growing our consumer lines for livestock, horticulture and pet and household products. Product manufacturers that use our renewable biomaterials could realize significant savings over expensive fossil-based resins and fillers such as carbon black. The products are not only sustainable, but an effective carbon sink, and an avenue to help reach Canada's carbon-sequestration targets.

Products & Services

Titan Clean Energy Projects manufactures activated carbon and plastics additives from waste wood and agricultural waste biomass, with the following uses:

1. Water and wastewater purification, including PFAS removal
2. Odor control
3. Oil adsorption and site remediation
4. Animal feed additive for gut health
5. Plastics additive for UV protection, strength, and color and replacement for carbon black.

Western Heritage (WH), founded in 1990, provides innovative, science based solutions to its customers. WH does this by leveraging the extensive experience and deep expertise of their specialists. WH began with, and continues to offer Cultural Heritage Services including archaeology, community engagement and consultation, geoarchaeology and geophysics. We have added to our mapping and monitoring services and our extensive experience in satellite imagery. Our even newer UAV surveys utilize optical, lidar, multispectral and thermal sensors. Our EFMP software manages this data and provides actionable information on current and historical environmental conditions. It does this by leveraging a suite of machine learning models. WH also provides GIS and image interpretation services, digital terrain models, and other models for both UAV and satellite imagery (Maxar). WH is currently flying and analyzing agricultural fields for insured risks such as wildlife damage. WH, a Maxar Reseller, is ISO 9001:2015 certified, and has Energy Safety Canada COR.

Products & Services

Satellite imagery (Maxar), opusTrack and opusSchedule software, EFMP software, lidar management software, archeology and cultural heritage management, ground penetrating radar services, image interpretation, GIS mapping services, and UAV flights.

Xtended Hydraulics & Machine (Xtended) is a Saskatchewan owned hydraulics manufacturer and machine shop, offering a full range of custom machine and fabrication work. They manufacture and supply hydraulic cylinders and parts, which are both compatible with and superior to OEM parts for any brand and type of equipment. Their shop has both CNC and manual machines, a welding/fabrication area, heavy duty mechanics, as well as their own industrial hard chrome tank. They also offer on-site services, line boring, and portable machine capabilities. They choose to make customer service their priority, and in doing so, specialize in rush jobs. They cater to all types of work and no order is too big or too small for their capabilities. They take pride in being one of Saskatchewan's only Aboriginal/Metis owned and operated custom machine and fabrication shops. Xtended Hydraulics and Machine is a proud member of the Canadian Council for Aboriginal Business and SIMSA. They are ISO, ISNet certified and ALI Certified.

Products & Services

Hydraulic cylinder and equipment repair, rebuild and manufacturing, custom CNC and manual machining, fabrication, hard chrome plating, design and engineering services, and mining equipment sales, service and development. Additionally, Xtended is Controlled Goods Certified and offers design, machining, and fabrication services for controlled components and assemblies. Some of Xtended's major in-house projects include an innovative pipeline injection system called the X-Quill, as well as a unique RFID based asset management and tracking system.
