About this Directory

Saskatchewan is home to a thriving technology sector, where innovation drives business solutions across industries. Companies in the province develop advanced digital tools, software, automation systems, and hardware that enhance productivity, optimize operations, and improve decision-making. From artificial intelligence and cybersecurity to cloud computing, IoT, and data analytics, Saskatchewan's technology companies are shaping the future of digital transformation.

With expertise spanning biotechnology, agriculture technology, intelligent transportation systems, electric vehicle charging, healthcare, energy, finance, manufacturing, and smart infrastructure, Saskatchewan-based innovators create scalable and secure technologies for global markets. Saskatchewan is pioneering advancements in precision farming, autonomous equipment, and data-driven analytics to enhance sustainability and efficiency in agriculture and food production. The province is also driving biotech innovation in health diagnostics, vaccine research, bio-based materials, and sustainable resource management.

With a strong focus on research, engineering excellence, and emerging technologies, Saskatchewan companies help industries stay competitive in an increasingly digital world.

If you would like a direct introduction to any of the listed companies, please contact the STEP team member listed on this page, and they will be happy to assist.

ABAzyne is a Canadian agriculture biotech company that develops leading patented synthetic Absciscic Acid (ABA).analogs for plant growth regulation applications. The research portfolio is a product of 30 plus years of research conducted initially at the National Research Council of Canada and subsequently at the University of Saskatchewan, all in collaboration with industry, academia and producer-based partnerships. ABAzyne continues to support basic research and advance applications with an expanding network of collaborators and strategic partners, in close relationship with the University of Saskatchewan and the Global Institute of Food Security.

Bindapt+

Visual Farm Dashboard

Adaptive Agriculture Solutions is best known for its thermostatically controlled in-bin grain drying system that uses its patented adapter plate transitions to control the supply of supplemental heat to grain bins. The company's technology has progressed in producing a series of Internet of Things (IoT) sensors attached to a grain bin to improve grain drying efficiencies through computer automation that turns any grain bin into an efficient grain drying and conditioning system. Adaptive Agriculture is headquartered out of Saskatoon, Saskatchewan (Canada), and has clients across the western prairie provinces and into the northern USA.

Products & Services

Both cellular based and Wifi connected devices for grain bin monitoring and conditioning. The Bindapt series of products features incoming air plenum temperature and humidity and static pressure sensors as well as the ability to monitor in bin grain cables, or its patented segmented in grain sensor "Binstick". The bindapt products can either be rooftop or ground level mounted, and come with a 110-220 volt power supply, or 12 volt DC powered solar / battery pack system. One or Two output modules can optionally control supplemental heaters, or offer a relay pack aeration fan control system, or rooftop exhaust fan systems. Other grain bin sensors, such as upper air Temperature, Humidity, CO2, and Lidar level are available as well. The system comes with an extensive Virtual Bin Inventory management system, as well as a fully traceable "from field to bin" team based program which allows multiple farm members to access and manage the systems and take control of this years crop plan.

At Agrimatics, we are committed to providing the agricultural community with powerfully simple technology. Our flagship product, Libra Cart, serves as both a grain cart scale and a harvest management system. It seamlessly connects to the grain cart's load cells and wirelessly communicates with a mobile device through Bluetooth® technology. Libra Cart automatically detects and records every unload from the grain cart, eliminating the need for additional sensors. It delivers accurate, real-time harvest data to a tablet or smartphone, and automatically syncs the harvest data to our cloud service. Libra Cart has earned its reputation as one of the most highly acclaimed Ag Tech products available, reflecting our dedication to innovation and excellence in the industry.

Products & Services

Libra Cart: A grain cart scale and harvest management system. Libra Express: A general scale and data management system. Cloud Service: Providing automatic data backup and facilitating harvest management, including reporting and software integrations.

Andgo's Intelligent Automation Suite creates efficiencies and saves resources by automating major manual scheduling challenges, such as: shift filling, vacation processing, and absence onboarding. Andgo's suite of products is designed to simplify and streamline workflow processes for complex organizations, providing insights to fill more shifts faster, with the right people. This solution suite helps address some of the largest issues facing organizations today: labor shortages and employee engagement, satisfaction, and retention.

Products & Services

A comprehensive end-to-end suite or à la carte that includes: Smart Call - Automate the communication of available short call shifts to eligible employees, Vacation Mapping - Optimize employee vacation usage and reduce complex processing overhead, Enhanced Absences - Facilitate the employee request process online for planned and unplanned absences, Inform - Easily communicate to a curated list of employees, Quick Dial - Receive, route, and prioritize urgent incoming phone calls automatically, Shift Prebooking - Post and fill vacant shifts months in advance.

BrewNature technology is designed to help reduce the amount of organic waste that ends up in landfills, which is a major contributor to greenhouse gas emissions worldwide. The BrewNature technology works by accelerating the natural process of composting, which usually takes 5-7 months to complete, down to just 5 days. The process involves breaking down organic waste using a combination of microorganisms and aerobic conditions.

Products & Services

In-vessel composting from 1 to 15 tonne units, water treatment and wastewater treatment.

Founded in Regina, Saskatchewan, Canada, in 2020 by cannabis retailers, for cannabis retailers -- BudSense makes selling weed easy. BudSense is used by over 300 retailers in Canada and the US. Typically buried under a never ending list of tasks, cannabis retailers need to constantly change their merchandising strategies to adapt to an ever-changing product offering. BudSense simplifies otherwise complex and time-consuming tasks for dispensaries by automating painful data entry. The more of these tasks BudSense removes or simplifies - the more scalable value is created for its users. BudSense's main differentiator is a user-friendly dashboard, allowing retailers to autonomously operate their dispensaries.

Products & Services

A wide variety of merchandising solutions including digital menus, paper menus, printed product cards, web menus, marketing menus, and more. In addition, BudSense fully integrates with Greenline, Cova, TechPOS, and LeafLogix POS systems to update product, pricing, and inventory information quickly and accurately.

Calian Agriculture develops, commercializes and markets cost effective, innovative grain storage monitoring solutions. This company offers an affordable system that allows grain farmers the ability to monitor stored grain from anywhere in the world, via the internet and mobile phone. This system was developed by engineers in Saskatchewan and is serving the market as an expedient way for grain farmers across Canada and the world to monitor grain temperature and moisture. The BIN-SENSE® product consists of sensor cables that are mounted directly inside each bin, as well as a single master unit to collect and transmit information to their website for secure viewing. The system is battery operated, requiring no external power source, and all information is transmitted wirelessly. Users are notified by text message if or when a drastic temperature change has occurred.

Products & Services

BIN-SENSE®, grain storage monitoring system, and Fuel Lock™, fuel monitoring and management system.

Global Ag Risk Solutions are a group of financial professionals who've come together because of one common belief - the insurance available to farmers today isn't working. They deserve more. Farmers need insurance that works for them. They've seen, first hand, how tough managing risk in farming today can be. They are based in the heart of one of the country's largest agriculture communities in southern Saskatchewan. They live this every day. They know the industry, understand the challenges all farmers face each day. That's how this unique product was born. It's a new, private, revenue-based risk management solution backed by a major Canadian insurer and it does what no other insurance can do. It can work for you, your neighbor or your friend. It's insurance that works for everybody.

Products & Services

A multi peril product that insures input costs plus revenue. The three major inputs – fertilizer, seed and chemicals – are covered, plus a specific amount of revenue per acre. As input costs increase over the year, so does the coverage with no ceiling and no effect on premiums. Payouts happen quickly and this insurance may be used as collateral and borrowed against with major banks.

IDS is an innovative Saskatchewan based engineering consulting and technology provider, established in 2012. IDS offers the industry's most advanced solutions for developing optimal network-level and long-term renewal plans of civil infrastructure systems. Their award winning software empowers engineers and asset managers to accurately assess funding needs, investigate implications of funding scenarios, and optimize the allocation of preservation budgets. Their software is unique to the markets they serve. IDS enterprise and cloud-based solutions help engineers and asset managers conquer the increasingly complex challenges, ensuring reliability and sustainability of public infrastructure systems. IDS services transportation agencies, municipalities, and water utilities, for them to make evidence-based decisions on the optimal replacement and rehabilitation of infrastructure systems.

Products & Services

Software guaranteed to generate truly optimal long term system-level renewal plans and long term solutions and services around four main product lines including Bridge Optimizer, Roads Optimizer, WaterNet Optimizer, and SewerNet Optimizer.

Limbus AI is a software company focused on the development of products designed to improve efficiency in cancer diagnosis, treatment and follow-up. Limbus Contour, the company's first product, utilizes machine learning models to perform accurate and fast segmentation of organs at risk - a critical component of radiotherapy treatment planning. The product is simple to use, integrates with any planning platform, and produces high quality contours. Limbus AI specializes in developing state of the art machine learning algorithms trained on a world class proprietary database of expert validated medial images. Through close clinical partnerships the company has created a research, validation and market testing pipeline capable of bringing their initial software offering to a broad market while providing multiple avenues of development for future commercial products.

Products & Services

Limbus Contour, the company's first commercial product, which utilizes machine learning models to perform accurate and fast segmentation of organs at risk - a critical component of radiotherapy treatment planning. The quality of the contours produced is expert level and the significant time savings allows clinicians to spend more time on patient care. Compared to existing atlas-based automatic segmentation software, this product is much faster, simple to use, integrates with any platform, and produces accurate contours on a large library of normal organs. The product is approved for use in Canada, the US, the EU and other international markets.

Western Heritage (WH), founded in 1990, provides innovative, science based solutions to its customers. WH does this by leveraging the extensive experience and deep expertise of their specialists. WH began with, and continues to offer Cultural Heritage Services including archaeology, community engagement and consultation, geoarchaeology and geophysics. We have added to our mapping and monitoring services and our extensive experience in satellite imagery. Our even newer UAV surveys utilize optical, lidar, multispectral and thermal sensors. Our EFMP software manages this data and provides actionable information on current and historical environmental conditions. It does this by leveraging a suite of machine learning models. WH also provides GIS and image interpretation services, digital terrain models, and other models for both UAV and satellite imagery (Maxar). WH is currently flying and analyzing agricultural fields for insured risks such as wildlife damage. WH, a Maxar Reseller, is ISO 9001:2015 certified, and has Energy Safety Canada COR.

Products & Services

Satellite imagery (Maxar), opusTrack and opusSchedule software, EFMP software, lidar management software, archeology and cultural heritage management, ground penetrating radar services, image interpretation, GIS mapping services, and UAV flights.

Xact Agriculture is at the forefront of agricultural innovation, leveraging advanced AI and multispectral satellite data to optimize soil health and enhance crop production. The company combines deep sector expertise with cutting-edge technology to provide farmers with precise, data-driven insights. Their solutions not only improve productivity and sustainability but also enable participation in carbon credit markets, supporting environmentally sustainable farming practices.

Products & Services

State-of-the-art soil fertility assessment tools that use AI and multispectral satellite data to provide high-resolution insights into soil nutrients. Other services include comprehensive soil nutrient analysis to help farmers make informed decisions about their land, and tools for carbon sequestration monitoring. By integrating advanced technology into agricultural practices, they help farmers improve efficiency, increase yields, and enhance sustainability.
